Software developer with more than 3 years of experience, I have worked on several projects, and in some of them I acted as the main technical manager of the team, helping to define solutions, business rules and application architecture.

I always seek to create solutions with well-defined rules, understandable and functional codes. I really enjoy learning new technologies, working as a team, sharing knowledge and taking on challenging jobs, and I'm always looking to keep myself in constant evolution.

---

## Technologies and Skills

- HTML, CSS, Javascript. (+3 years)
